

Springfield Elementary

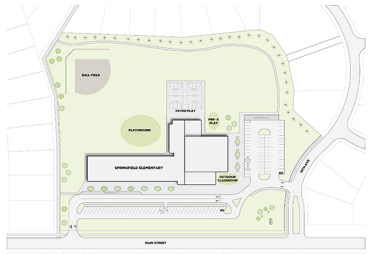

A new 3-section elementary school will replace the existing 56-year-old facility. It will sit on a 9-acre site located on the north side of Main Street between 9th and 10th Avenues. The new 2-story building will consist of 74,000 square feet of learning space. The new facility will relieve pressure from the existing, undersized facility and include room for growth. The building's main entrance will face south toward main street providing an inviting impression to the community.

The classroom wing will incorporate a "learning pod" approach. Each grade level will have an individual pod that includes classrooms, small group rooms, and open learning environments to provide teachers and students with a multitude of tools. Pods are situated to enhance learning by taking advantage of natural light, acoustical separation and privacy while prioritizing safety and security.

The new shared learning areas will be located on the eastern side of the building. They will allow for easy access from the parking lot and provide separate secure entrance to Pre-Kindergarten. It also allows for after hours access to the gym, commons and media center for both student and community events.

The overall site incorporates all of the outdoor play areas necessary with the addition of natural features and an outdoor classroom for hands on learning.

Separate drop-off, parking lanes, and bus parking provide safe access to the school for students. In addition to vehicle access, the site is situated to allow for pedestrian connectivity from all surrounding neighborhoods.
